MEMORANDUM FOR:

OC-0

STATINTL

FROM:

Chief, Real Estate and Construction
Division, OL

SUBJECT:

Impact of Projects SAFE and ADSTAR on
Telephone Facilities

REFERENCE:

Memo from Chief, [REDACTED] to Chief, RECD
dtd 12 May 77, Subject: Impact of
Project SAFE on Telephone Facilities

STATINTL

1. Planning for the SAFE and ADSTAR computer centers has progressed to the point where it is necessary to review those preliminary assumptions which were made in the early planning stages of the project. One area of great importance is that of continuity of telephone service to the entire GE Corridor of the Headquarters Building. The referent memorandum, prepared by your office, stated that the ADSTAR area would be served from the GE0422 satellite telephone closet via the underfloor duct system existing in the area. In coordinating the design of the ADSTAR system with the ADSTAR Project Manager, this satellite telephone closet falls directly between a proposed wall separating the processing area from the Uninterruptible Power Supply (UPS) area. This presents a significant problem to both the Logistics project team designing the UPS area and the ADSTAR project team designing their facility. It is, therefore, requested that your office study this situation and inform us whether this satellite closet (GE0422) could be removed from the area without jeopardizing phone service. Our understanding is that the remaining area will require minimal phone service.

2. The GE78 satellite telephone closet will remain in its present area and we will coordinate with the Information Systems Security Group to ascertain whether this closet must be shielded in any special manner. We will coordinate these findings with your office.

3. In order that you might fully evaluate the impact of these two projects on telephone service in the area, it is now
